Supervisor Meeting Briefing — 29 October 2026

导师组会汇报简报（中英双语 · 面向 Dr. Mumtaz 的英文口径 + 组内中文提示）

Course / Group	JC2001 Introduction to Software Engineering (2026–27) · Group 5, BSc BMIS · 10 members
Project	Smart Study Assistant System (SmartStudy Console) — misconception diagnosis on the chosen distractor
Supervisor / Presenter	Dr. Shahzad Mumtaz · Presented by Yuxuan Wu (Group Lead / PM); each chapter answered by its own author (§8)
Position in plan	Cycle 3 (Reports cycle), Week A closed 25 Oct, Week B (first drafts) running — internal schedule, Week A/B/C per `reports/cycle3_master_plan.md` §5
Evidence baseline	Repository HEAD `32a583d`, working tree clean, all figures below re-measured on **25 Oct 2026** (see §9 index)
Next assessment event	Mandatory Project Update 2 — team deadline held at 2 Nov 2026; the exact date on the MyAberdeen course page is being re-confirmed this week (our internal proposal file lists 6 Nov)
Privacy note	本册不含学号与邮箱（25 Oct 脱敏提交 `61eba90` 已执行）；如需带学号版本，我们会按官方模板单独出一版。

1. Three opening anchors — 定场三句：先定义、再对比、后划边界

1. **What it is.** “We built a practice quiz tool whose feedback is attached to the *wrong option the student picked*, not to the question.”
   不要从技术栈讲起。这句是全部讨论的落点。
2. **What is different.** “Quizlet tells you right or wrong; a general LLM spoils the answer and can invent the statute. We name the concept that was mixed up and the prerequisite that is missing.”
3. **Where the boundary is.** “It is a feasibility prototype: 17 questions across 9 disciplines, 51 traps, one offline command, no cloud dependency during the demo — not a product.”

2. Verified status — what changed since the Cycle 2 review — 只报能当场复测的数字

Measure	Reported 15 Oct	Verified 25 Oct	How to re-check it
Automated tests	114 passed	**147 passed, 0 failed (17 warnings, 3.11 s)**	`python -m pytest tests/ -q` · 9 files, **80** test functions, 147 cases after parametrised expansion
API surface	8 endpoints	8 endpoints frozen	No new features since 18 Oct; feature freeze is a deliberate scoping decision (§3, item 4)
Graph-augmentation evidence	not in Cycle 2 pack	MMLU 12 subsets: **7 gains** / 3 ties / **2 losses**	`graphrag（终）/final_systematic_report.csv` · best +2.5 pp (Professional Law), worst −1.3 pp (High School Physics), −1.0 pp (HS US History)
Git history	47 commits	66 commits, 7 authors	`git log --all --pretty=%an` · lead 39 / 66 = 59% — declared openly, see §4C
Report chapters with material	0 / 7	**2 / 7**	`reports/final_report/` · 5.3–5.4 (outline, sources, Figure 5.2) and 5.6 (draft, Figure 5.5) received
Numbered figures available	3 UML	5	Context model, global use case, diagnose sequence + Figure 5.2 trap causal chain + Figure 5.5 deployment
Secrets / PII hygiene	**credential in repo**	**remediated 25 Oct**	Commits `6ca027c` (purge), `47c0d95` (quarantine legacy ZIP), `61eba90` (PII redaction); Aura password rotated

Measure	Reported 15 Oct	Verified 25 Oct	How to re-check it
Question bank	4 disciplines / 12 Q / 36 traps	9 disciplines / 17 Q / **51** traps	`backend/app/data/seed_questions.py` (932 lines): counted 17 `QuizItem(` entries and 51 `TrapDetail(` entries — our own documentation still quotes the old figures, see §4E

口径说明：10 月 19 日的一次记录为 150 passed，今天 HEAD 上实测为 147 —— 两个数字至少有一个是错的，见 §4E；本周起每次会前重新实测，旧数字不再引用。

3. Decisions and what each one cost us — 每条都有被否决的方案和代价，这是报告第 4 章 ADR 矩阵的浓缩

Decision	Alternative we rejected	What it costs us (stated in the report)
Single process, single port, no database, no build step	Microservices + hosted demo so the reviewer sees a “modern” stack	No scaling or multi-tenancy to discuss; the examiner runs it offline on one command. Recorded as ADR-01, Ch 5.6.
Diagnosis by table lookup on the chosen distractor	Let the LLM write the misconception feedback at run time	Only the 51 predefined traps are covered. Ch 5.4.2 keeps a comparison table *including the row we lose*: on open-ended questions lookup fails completely.
Hand-written vanilla front end (72 KB CSS, 253 KB JS)	React plus a bundler	No component library, no reuse; every screen is manual. Chosen so the submitted ZIP runs without `npm`.
Reports-first: feature freeze from 18 Oct	Keep adding features (teacher dashboard, cohort heatmap, dynamic question generation)	Two of five SMART objectives stay partially met; teacher view moved to “Won't have” in the MoSCoW matrix.
Learner data kept as labelled session/mock with `source` returned in the payload	Silently seed realistic-looking data so the screen looks “alive”	The reviewer sees the word *mock*. Accepted: ASM-02 in `reports/assumptions.md` records it as an assumption to be replaced, not a result.

4. What went wrong — reported before being asked — 四条负面事实，主动交出

Item	Fact and current state
A. Credential leak	An evaluation script held a literal Neo4j Aura username and password, committed and pushed during prototyping. Remediated 25 Oct: constants purged (`6ca027c`), the legacy PoC ZIP that still embeds the pre-remediation copy quarantined out of the deliverable path (`47c0d95`), password rotated. We want to write this up as a short security case study in Ch 5.6 — see Q4.
B. Negative empirical result	Graph augmentation did not help on 5 of 12 MMLU subsets: 3 unchanged, High School Physics −1.3 pp, HS US History −1.0 pp. We read this as expected behaviour on reasoning-type and free-association items, and as a single-sample run with no significance testing. The negatives stay in Ch 6.3 and Figure 6.2.
C. Contribution concentration	39 of 66 commits are by the group lead: the code base is effectively one-authored. Report writing is being distributed to break this — one chapter per member, plus random questioning of any author in meetings (§8). Appendix A will show the skew as it is. See Q1.
D. Gate G1 partially missed	The internal gate required all 9 chapter outlines by 25 Oct; **2 of 9 landed**. Per the published rule the late chapters are reclaimed to the PM unless the author confirms this week, and the non-submission is recorded in Appendix A. Applying this against five teammates is the point — see Q1.
E. Documentation lags the code	Two verified examples, found by re-measuring on 25 Oct: (1) the Ch 5.6 draft states *150 passed in 1.79 s* while the repository measures *147 passed in 3.11 s* from the same 80 test functions — at least one of the two is wrong and we have not yet established which; (2) every plan and report file still describes the bank as 12 questions / 36 traps in 4 disciplines, whereas the code now contains 17 questions / 51 traps in 9 disciplines. Fix in progress: one number registry (`reports/final_report/_evidence/number_registry.md`), every figure tied to a re-runnable command, no cross-chapter number copied by hand, and a re-measure before each meeting.

补充：RAGAS 指标未跑完（依赖已轮换的云端实例），第 6 章表 6.4 将如实写 “not run”，不放我们自己不信的分数 —— 见 Q3。

5. Report against the official chapter order — 结构不改、顺序不改，Week B 目标：各章达到目标页数的 60%

Official chapter	Author	Target pp.	Status	Next concrete step (before 2 Nov)
1 Introduction & project context	Lin Yongtong	5–6	**no outline**	Competitor table (≥5 products × 4 dimensions) from `competitor_analysis.md` + 3 personas
2 Functional & non-functional requirements	Zhang Zijian	6–7	**no outline**	14-row MoSCoW with ≥3 “Won't”, 5-class NFR table with measurable indicators
3 Use cases & requirements modelling	Xie Weixin	6–7	**no outline**	Reuse Figure 3.1 use case diagram; 6 Cockburn-style descriptions incl. exception flows
4 System design & architecture	Wang Sijian	9–11	**no outline**	Class diagram to draw; ADR matrix ≥6 rows with rejected option + cost filled in
5 Implementation	Jiang Hao (5.1–5.2) · Dong Siqin (5.3–5.4) · Xi Yusai (5.5) · Liang Zixuan (5.6)	14–16	**2 parts in**	5.3–5.4 to draft body from delivered outline; 5.1–5.2 and 5.5 outlines overdue
6 Testing & evaluation	Yang Mingjie	7–8	**no outline**	Evidence already measured: 147 cases, 25 adversarial functions in 6 groups, MMLU 12-subset table, NFR-by-NFR scoring
7 Conclusions & future work	Wu Yuxuan	3–4	Week C	Settle the 5 SMART objectives one by one, ≥5 limitations, ≥3 “what failed”
Appendix A Group Workload Profile	Official MyAberdeen template, 10 signatures	1–2	—	Completed once chapter ownership is settled after this meeting

6. Plan to the Project Update 2 date — 26 Oct – 2 Nov

Date	Action	Owner
26–27 Oct	Confirm the real Update 2 deadline on the course page; issue the 24-hour pre-meeting rule (each member takes 5 questions from the Q&A defence library and answers them in writing)	PM + all
28 Oct	Late chapters either claimed or reclaimed; first drafts of 5.1–5.2 and Ch 6 reach 60% of target	Jiang Hao, Yang Mingjie
29 Oct	**This meeting.** Six rulings requested (§7); answers become the acceptance criteria for Week C	Supervisor + team
30 Oct–1 Nov	Cross-review, ≥5 written comments per reviewer; number registry reconciled so no figure in the draft contradicts the repository	Assigned pairs
2 Nov	Project Update 2 submitted on MyAberdeen as one group entry: WBS activity, owner, deadline, current status — including the missed gate and the concentration in git history	PM (Yuxuan Wu)

7. Six decisions we want your ruling on — 主动把纠结点交给导师：这是最有效的一条“去 AI 感”动作

Q1 Appendix A: how honest is “honest”? Our git history is 59% one author and 5 of 9 outlines are late. We intend to record the skew as it is (0% / +X% / −X% per the official template) rather than smooth it.
请裁决：如实倾斜的档案在评分与“小组工作”认定上会不会被当成不合格？还是平滑过的档案更容易被质疑？我们准备按你说的执行，并让全员签字。

Q2 Do negative results earn credit or cost marks? Ch 6.3 will show 7 gains, 3 ties and 2 losses with the bars coloured. Is that the level of critical evaluation you expect, or should the framing stress the mechanism rather than the score change?
我们倾向如实呈现（§4B）。想确认它在你眼里是"评估能力"，不是"功能失败"。

Q3 RAGAS: state "not run", or re-run a smaller subset offline? The metrics depend on the cloud instance whose credential we rotated. A partial re-run costs an estimated 4–6 hours and would compete with Week C merging.
请给一个优先级：诚实留空，还是补一小块带保留说明的数字？

Q4 Put the credential incident inside the assessed report? It is verifiable and human. We are unsure whether describing a security mistake in a submitted artefact reads as reflection (good) or as an admission that should be handled privately with the coordinator instead.
若可以写，我们会限制在 Ch 5.6 半页：事件、检测、补救、复查；不写凭证本身、不写平台名。

Q5 How explicit should the AI-use declaration be? Our process used spec-kit and multi-agent scaffolding for code and drafting. Every submission passes Turnitin and we follow University academic-integrity guidance. We want the declaration to match how the marker actually reads it.
请给一个可操作边界：写"工具清单 + 人的决策清单"够不够，还是需要逐章标注？

Q6 How much business framing is safe? The brief asks for intended users and practical/business value, so Ch 1.6 and 7.3 include three pricing scenarios marked as assumptions. Where is the point at which that reads like invented market claims?
我们目前的边界：不编用户调研（没有 n=200 问卷这种东西），只写文献、竞品分析和组内 10 人的非正式验证。

8. Who answers which line of questioning — 固定应答顺序，组长不抢答

Topic raised by supervisor	Answers first
Architecture, diagrams, design decisions	Wang Sijian (Ch 4)
Testing, empirical evaluation, validity threats	Yang Mingjie (Ch 6)
Problem, competitors, users, business value	Lin Yongtong (Ch 1)
Requirements, MoSCoW scoping, use cases	Xie Weixin (Ch 3) · Zhang Zijian (Ch 2)
Implementation, algorithms, question bank, GUI, deployment	Jiang Hao · Dong Siqin · Xi Yusai · Liang Zixuan (Ch 5)
Plan, workload, submission mechanics	Yuxuan Wu (PM) — summary and fallback only, never first

> **If we cannot answer.** The agreed form of words is: "That evidence is not ready today; we are collecting it this week and it will appear in chapter X, and we will bring the measured number next meeting." No placeholder, no "a teammate did this".
> 答不上来的标准动作：承认 + 给出落在第几章 + 下周带实测数字。不推给组员，不编。

9. Evidence index — 简报里每个数字都能在五分钟内复现

`tests/` (9 files, 80 functions → 147 cases, 3.11 s) · `backend/app/routers/` (8 endpoints) · `backend/app/data/seed_questions.py` (17 questions, 51 traps, 9 disciplines) · `graphrag（终）/final_systematic_report.csv` (12 MMLU subsets) · `reports/final_report/` (chapter material as of 25 Oct) · `reports/figures/` (3 UML) + `reports/final_report/*/figures/` (Figures 5.2, 5.5) · `reports/cycle3_master_plan.md` (chapter map, gates G1/G2, 17 figures / 21 tables pre-allocated) · `reports/cycle3_task_packs/` (9 author packs) · `reports/supervisor_qa_defense_library.md` (Q&A drills, §7 integrity lines) · `reports/assumptions.md` (ASM-01…ASM-06) · `reports/phase2_cycle2_progress_report.md` (Cycle 2 baseline, 15 Oct) · `docs/course/2026-27-GroupProjectDescription-and-Requirements.txt` (official brief: chapter order, 40–60 pages, A4/2.54 cm/12 pt/1.5, no source code in body, ≥3 of 4 project updates)

Formatting compliance for the report itself: A4, 2.54 cm margins, single column, 12 pt Arial or Times New Roman, 1.5 line spacing, 40–60 pages of body text, no source code, Harvard references (≥25), Appendix A on the official MyAberdeen template with all 10 signatures.
